Frequently Asked Questions:

Q. How long will a gallon last?

A. For a maintenance horse, feeding 2 oz (1/4 cup) daily, a gallon will last about two months. For a performance or higher maintenance horse feeding 4 oz (1/2 cup) daily, a gallon will last about one month.

Q. Is it true that with a soy oil supplement I can reduce the amount of grain I'm feeding?

A. One of the many benefits of soy oil supplements, Top dressed on a quality feed grain, your horse gets all the essential fatty acids and vitamin-E they need without having to give them large amounts of grain.

Q. How long does it take to see results?

A. Every horse's dietary needs are different, but typical results can be expected in four to six weeks. In the coat can be seen in as little as a week or two.

Q. Can I feed this to my pregnant and younger horses?

A. Yes. We have been feeding Soy-Natural-E to our foals since they started to creep feed. Our mares are also on Soy-Natural-E during pregnancy. We have noticed that the foals and young stock tend to shed their winter coats faster and shine on Soy-Natural-E. They also have a healthy appetite and really blossom.

What's the difference? Typical vegetable or corn oils found at your local grocery store have been refined with the use of chemicals. Bleach, solvents and deodorizers give these human consumption oils an odorless and crystal clear appearance but they also refine out all of the natural vitamins and antioxidants that are so important to the horse's diet.

Due to the unique chemical-free process in which Soy-Natural-E is made, all of the natural fatty acids and nutrients are maintained. Because of the high levels of natural antioxidants (tocopherols), Soy-Natural-E is a very stable feed supplement with a long shelf life. Feeding Soy-Natural-E is easy; simply top-dress it on your horse's feed.

Frequently Asked Questions

Q. How long will a gallon last?

A. For maintenance horses feeding 2 oz (1/4 cup) daily, a gallon will last about two months. For performance or higher maintenance horses feeding 4 oz (1/2 cup) daily, a gallon will last about one month.

Q. How do you sell your product so reasonable compared to other equine soy oil supplements on the market?

A. By keeping our operation small, our overhead expenses are low, thus allowing us to promote a quality product at a reasonable price.

Q. I've seen other soy oil supplements with higher vitamin-E content or other vitamins included, does Soy-Natural-E have these?

A. With the exception of trace amounts of flavoring, Soy-Natural-E is completely natural and does not have any synthetic vitamins added.

Q. How long does it take to see results?

A. Every horse's dietary needs are different, but typical results can be expected in four to six weeks. Noticeable changes in the coat can be seen in as little as a week or two.

Q. Is it true that with a soy oil supplement I can reduce the amount of grain I'm feeding?

A. Yes. That is one of the many benefits of Soy-Natural-E. Top dressed on a quality feed grain, your horse gets all the essential fatty acids and vitamin-E they need without having to give them large amounts of grain.

Q. Doesn't my grain have essential fatty acids?

A. Yes it does, but it is hard to preserve the fat content in dry grain. Many of the natural oils that were in the grain have been destroyed when exposed to natural elements. Heat, air, and sunlight all have an effect on the fatty acid content in grain. Most of your standard feeds available on the market are very low in fat content. That is why it is important to supplement your grain with a product like Soy-Natural-E; it is 98% fatty acids.

Q. Can I feed this to my weanlings and younger horses?

A. Yes. We have been feeding Soy-Natural-E to our foals since they started to creep feed. Our mares are also on Soy-Natural-E during their pregnancy. We have noticed that the foals and young stock tend to shed their winter coats faster when on Soy-Natural-E. They also have gorgeous shine to them and really blossom.

Q. How long have you been using soy oil supplements on your horses and what results have you seen?

A. Approximately six years ago we had a scare when one of our yearlings became very ill with colic due to an impaction. This really made us take a hard look at our feeding program. At the time we were feeding a high quality grain feed at the recommended feeding ration. It was at that time that we decided to reduce the amount of grain ration we were giving our horses and look for a better alternative. After much personal research, we have found that feeding more fat in our horses' diets and much less starches and sugars, our horses are acting and looking better than ever. Since top dressing Soy-Natural-E on our horses' rations, the results have been amazing! The most noticeable things we have seen are how calm they are, their strong hooves, shiny coats, and how overall healthy they look; they have a very healthy look to them all year-round.

Please feel free to [contact us](#) with any other questions.
